uPVC DOORS & WINDOWS

uPVC is the general abbreviation for un-plasticized poly vinyl chloride. It serves as a very useful construction material due to the numerous benefits that it offers and is widely used for manufacturing doors, windows and pipes. A huge advantage of uPVC doors and windows is the galvanized steel core of the profiles which makes the finished products much stronger and firmer. They also offer higher efficiency in terms of thermal insulation, soundproofing, and heat shielding. High-quality uPVC windows and doors can transform your home drastically by reducing heat loss, noise, condensation and enhancing the comfort level and value of your property.

Why uPVC?

The demand for uPVC windows and doors is increasing because uPVC windows and doors are efficient for thermal insulation, soundproofing, and heat shielding. High quality uPVC windows and doors can transform your home drastically by reducing heat loss, noise and condensation, enhancing your comfort level and value of your property.

FAQ - Conch Profiles

What colours are available?

Generally available profiles are white in colour, different colour profiles can be provided depending upon the quantity of the project.

Are uPVC windows available in the same style as aluminium and timber?

There are very few limitations when using uPVC window profiles. uPVC windows are available in standard and customer specific sizes. We have our own designs, which are constantly being updated. The usual styles: casement, side hung, tilt and turn, fixed and sliders are available.

Why should I use uPVC windows and doors, rather than aluminium or timber?

The main advantage of uPVC windows and doors is their energy efficiency, better sound and heat insulation, easier to use, less maintenance, and durability.

Are uPVC windows expensive?

In context to Nepal market quality uPVC windows are initially more expensive than other low grade window systems on the market, but the cost is compensated by performance and minimal maintenance in the long run.

Are products covered by Warranty?

All windows and doors come with 20 year warranty on Conch profile, 5 year on Conch profile and 2 year warranty on hardware

Does uPVC discolour?

As long as the profiles used to fabricate uPVC windows are heat stabilized, the original white colour will not discolor. Upvc windows installed in different climate condition globally has had a good resistance to discoloration for over 10-15 years.

How strong are uPVC windows?

Window frames have internal galvanised steel reinforcement. Furthermore, uPVC windows all have fusion welded corners, so no mechanical fixing is used. This makes the chance of breakage very low in comparison with those windows using mechanical corner style fixings.

Can noise proof possible in uPVC System?

Noise proof is possible in uPVC system and better sound insulation can be done by proper selection of glass i.e higher thickness, double glazing glass as per site location and requirement of client.
